

## Curious Chicken Games announces top-down arcade racer GeneRally 2 arrives on Steam Early Access on the 30th of May

**11th of May 2023 – Jyväskylä, Finland** - Finnish development studio Curious Chicken Games is proud to announce the **release of their debut title, GeneRally 2, on Steam Early Access on the 30th of May.**

GeneRally 2 is a **friendly top-down arcade racing game for up-to eight players with an easy-to-use, built-in track editor.** This project is also the sequel to the 2002 classic, GeneRally - one of the most played arcade racing games of all time! Have fun racing alone against the AI; with your friends in "no split-screen necessary" couch PvP; or try your hand at creating tracks and sharing them with the world!

**Early Access Launch Trailer:** <https://www.youtube.com/watch?v=GVIgvtppdc>

**Press Kit:** <https://gene-rally2.com/press/>

### Key Features

- **Experience a wide variety of fun and interesting tracks created by the GeneRally 2 community or make your perfect track in our track editor.** With 43 objects (and more being added all the time); 12 different surface types (from dirt and gravel, to snow and ice); and a feature-packed terrain-editing tool - the only limit is your imagination! Upload your creations to Steam Workshop and share them with the world.
- **Race against the clock** (and the ghost car) **in time-trial; against the AI; or with friends in couch PvP** (online multiplayer coming during Early Access). There's no need for split screen - the whole track is visible at once - so grab your friends and family, and get racing! Compete in single races, or see who's victorious over multiple races in championship mode. Up to 8 players can play together on the same computer.
- **Customise your car** and stand out from the crowd - adjust the colours and paint scheme for you and every car in the race.
- **Detailed car physics take account of many different real-world parameters** like drive-train type (FWD/RWD/AWD), suspension travel/rebound, weight distribution and more! The cars are easy-to-learn but hard-to-master, based on a realistic physics simulation.
- **Plan your pit stops and manage your fuel, tire wear and damage** over the course of the race - or turn all of those off and enjoy unlimited ability to run your friends off the road!
- With a **variety of different cars** (5 at launch, more coming later), each with their own unique performance and handling characteristics, there's never a dull moment.
- **Tweak the AI opponents for closer racing** - choose between multiple driving style "profiles" and adjust their skill level to battle for victory.
